Experiences / Jobs

Summary

Overall, I have 15+ years post degree programming experience, I started with C++ & VB6 in my student life and then moved to VB.net and created small and interesting applications. In 2011 I have completed my master?s and started my career, worked with different companies and organizations mentioned below. Currently working with C#, Asp.net, Cake PHP and other related technologies and framework

Application Developer at Al Dhafra Cooperative Society

24-jun-2018 - Present

- Working on multiple projects at same time.
- Developing new Web applications for upcoming activities and events.
- Maintenance of existing application, scaling it and making customizations with requirements.
- Most of the applications have integration with multiple other systems to get secure authentications and get direct data via SOAP, Rest web services and direct database connections.
- Communication with internal and external stakeholders and other departments to get requirements
- Participating from requirements gathering, designing, development, test, deployment, maintenance, backup, and security managements
- Main projects include the following with development stacks.
- **Employee Self Service (ESS):** ASP.net MVC, MS SQL Server, MS Dynamics NAV integration, AD Auth
- **Company Main Websites (adcs.ae with sub domains)** ASP.net MVC, MS SQL Server, NAV integration
- **Point of Sale:** Cakephp, MySQL, Bootstrap, jQuery, Ajax etc.
- **ADCS Portal:** ASP.net MVC, MS SQL Server
- **Raffle and Loyalty management system:** Cakephp, MySQL, Bootstrap, jQuery, Ajax etc.
- **Shareholder and Employee Card printing system:** Cakephp, MySQL, Bootstrap, jQuery, Ajax etc.
- About 20 similar more projects in my 5 years in this company

Before such applications were being developed by external companies, now I am developing and doing its maintenance and scaling in house.

Senior PHP Developer at USP

Sep-2015 - 22-jun-2018

- Worked as senior developer and team lead at Peshawar branch
- Handled multiple bespoke projects development and scaling.
- Daily online standup meetings were good experience and productive.
- Worked on existing projects and developed few from scratch too.
- My project at USP were below with PHP, MySQL, Bootstrap, jQuery, Ajax, Web Services
- Bespoke E-Learning Management System, with learning, Registration, Quizzes and test, and certifications
- Project and Employee management system
- Dynamic Workflow and form approval system
- few Sales and Marketing websites like mathatar.co.uk uspsoftware.com usptraining.co.uk etc

CakePHP/Database Developer at BEFARe

Aug-2014 - Aug-2015

- BEFARe is local NGOs working on projects of international NGOs USAID, UN, UNICEF etc
- I was hired in a project to develop data entry application for existing and new data.
- They were frequently organizing events and then at end they were asking different questions, a survey type but their team staff were entering data directly.
- They were having Question back, and there were different categories and question types and options.
- Application was heavily used by data entry operators. Admins were able to manage Questions bank and generate different reports.
- I was directly reporting to IT team of USAID and giving progress, they provided database schema to follow

---

Software Engineer (web) at Phanteams

Feb-2014 - Aug-2014

- Phanteams is US based company having branch in Peshawar Pakistan
- It was my first experience working with remote company, they were very professions, strict and cooperative for time and deadlines.
- I have started Cakephp at Phanteams and completed 3 projects within 6 months there were.
- Zippyforms.com kind of basic AI to fill different application form automatically based on entered data.
- Web Services for an IOS app related to health and Hospital.
- Web based admin panel for managing above web services and other administrative activities.

Senior PHP Developer at IT Artificer

May-2012 - Feb-2014

Me and my 2 class fellows started our own business as we qualified to get financial subsidy from govt to start a business

It was good experience still helping me, because along with technical involvement and contribution in project development. We were also exposed to different managerial and organizational challenges where we learn to think out of box and know limitations, interests of an Employer from employees.

- PHP and .net based web and desktop application development.
- SEO, Marketing, Company registration, hunting projects, direct dealing with clients, office administration.
- To survive because projects were not giving enough income, we also started web development training
  which proved to be better income source as well as the best method to learn new things and by heart it
